## 01

## Assuming an essential role in city life, only made possible with door-to-door services.

Number of carried passengers, classified by transportation facility

Other public transport facilities share the responsibility of transporting passengers only within specific time frames (from first departures until last stops) from one designated location to another, but taxis are available twenty-four hours a day, with door-to-door services that meet the needs of individual passengers and play an essential role in city life.

## Nationwide

## Total number of carried passengers nationwide: 29,711 million people (100\%)

Source: "Transportation-related statistics" by the Ministry of Land, Infrastructure, Transport and Tourism (2014)
Tokyo

Total number of non-periodic carried passengers in the special wards of Tokyo: 4,637 million people (100\%)

Total number of taxis in Tokyo (2014)
48,885
(20.3\% of total nationwide)

14,430

Private taxis

## Transitions in the total number of taxis nationwide

As of March 31, 2015, according to the Ministry of Land, Infrastructure, Transport and Tourism

## Transitions in the number of corporate taxis in Tokyo

## sEcion 01 An overview of the taxi industry

## Meeting regional transportation needs in five zones.

laxizones and number of venicles

## A systematic 24-hour service system of about 2.5 people per vehicle.

## The scale of corporate taxi companies

Taxi companies, which are mostly small and mid-sized, do not receive monetary aid from the government like other public transportation companies do.

## SECTION 01

An overview of the taxi industry

## By scale in number of employees

## By scale in capital

As of April 1, 2014, according to the Tokyo Hire-Taxi Association

## The service system of corporate taxis

Corporate taxis use a service system that meets the demands of each and every passenger from early in the morning to late at night all throughout the year primarily with the vehicles driven by about 2.5 drivers each, and divided into six shifts, namely $A, B, C, D, E$, and $F$.

[^0]

As of 31.03.15, according to the Tokyo Hire-Taxi Association

## The increased number of vehicles after the loosening of regulations

Restrictions on the number of taxi were eliminated on February 1, 2002 and the terms and conditions that were put in place until then were substantially loosened as shown below.
(1) From a system of approval to a system of prior notification
(2) The minimum number of vehicles that had to be kept dropping from 60 to 10
(3) From the need to own a business office and garage to having rights to lease
(4) From the need to purchase new vehicles to the right to purchase used vehicles

Entry has become extremely easy and the expenses required per vehicle have dramatically dropped as a result of the substantial loosening of the conditions for entry. Because it has become a business that anyone can enter at reasonable fees, the number of taxis has grown significantly in a short period of time to reach 6,087 vehicles. There is also a significant number of companies that started off with ten vehicles but increased their number of vehicles due to increased management efficiency.

- Taxis are regulated in some form or another in terms of comprehensive metropolitan transport policies in most major cities throughout the world. However, metropolitan transport policies were ignored in Japan and principles of competition were forced in. This led to opposite effects such as the wages of drivers decreasing and traffic disturbances.

## Initiatives related to the recent decrease in number of vehicles

The supply-side control measures (the designation, etc. of specified special regions for monitoring) enacted by the Ministry of Land, Infrastructure, Transport and Tourism through notification on July 11, 2008

## Revisions in the "Act on Special Measures Concerning Taxis"

The "Act on the Partial Revision of Acts on Special Measures, etc. Concerning the Standardization and Revitalization of General Passenger Vehicle Transportation Business in Specific Regions" was enacted on January 27, 2014 (designation, etc. of specific and semi-specific regions).

## Active efforts are being made in dealing with fluctuating fuel prices and environmental measures.

## The prices of fuel for taxis

LP gas prices are always unstable due to large fluctuations in FOB prices and currency exchange rates, and because half of the imports are from Saudi Arabia and other Middle Eastern countries.

## Environmental measures

As of 1962, corporate taxis in Tokyo have been running on the environmentallyfriendly LP gas, which emits low amounts of substances such as Nox (nitrogen oxide), SPM (suspended particulate matter), and Sox (sulfur oxide). The drivers also do their best to control air pollution by practicing "eco-driving" (fuel-efficient driving) as well as "idling stop driving", which are required under Tokyo's ordinance on environmental preservation.
Active efforts in business operations that cause less environmental burden (under the Green Management certification system) have been promoted since 2004 along with the incorporation of fuel-efficient and low-emission vehicles such as hybrid and electric vehicles.
An EV/HV taxi stand was set up in front of the Shin-Marunouchi Building at JR Tokyo Station in October 2011.

Number of taxis by fuel type

| By fuel type <br> By district | LPG | Hybrid (HV) | $\begin{gathered} \text { LPG } \\ \text { converted } \\ \text { vehicles(*1) } \end{gathered}$ | Plug- in hybrid vehicles (PHV) | Electric vehicles (EV) | Clean diesel vehicles | Gasolinepowered vehicles | Total |

|  | Automobile tax |  | 9,500 yen | Those (for business) that exceed 1,500cc | Taxed as of April 1 , 1984 |

## sECTION 03

(Note) 1. Subject to consumption tax of 8\% as of April 1, 2014 (3\% increase)
As of March 31, 2015, according to the Tokyo Hire-Taxi Association

## Promoting digitalization and active IT use to provide better services.

Efficiency in vehicles dispatched by radio

Effects brought upon by the introduction of digital systems
Shortened average reception time for dispatch (example by Wireless Group A)
70 seconds to 27 seconds by switching from analog radio to digital radio *time shortened by about 60\%

Acceptance of credit cards, electronic money, etc.
In addition to accepting conventional forms of payment such as cash, tickets, or coupons; the acceptance of credit cards, IC cards, electronic money, etc. to conform to the diversification in methods of payment is making payment cashless and fast.
 The cost of installing systems for this is about thirty-thousand yen per vehicle but the number of vehicles that have them is rising each year.
Credit card system installed: 89\%
Electronic money system installed: 63\%
(from a survey of corporate taxis, as of March 31, 2014)

## Use Tokyo' s most widely-used smartphone-based taxi dispatch system that allows you to reach roughly 11,000 taxis.

## Dispatching a taxi with a smartphone app (Tokyo Taxi Association-TAKKUN)

It is now possible to quickly and easily call a cab with a smartphone app. The number of users is increasing as it has many functions that eliminate the need to explain to an operator where you need to be picked up or where your destination is. The "Tokyo Taxi Association-TAKKUN" app, which is the first of its kind in the world - exceeding the boundaries of taxi companies and allowing you to call the nearest taxi vehicle to you in special zones / the Busan district, began its full-scale services in January 22, 2014.
This app currently allows you to reach roughly 10,963 taxis.
(The total number of taxis in Tokyo is about 40,000, which accounts for about $23 \%$ of all taxis nationwide.)
(The total number of corporate taxis in Tokyo is about 30,000, which accounts for about 34\% of all corporate taxis nationwide.)
Plans for further enhancements such as those in collaboration with multilingual and sightseeing apps are underway for the Olympic and Paralympic Games.

- Official Tokyo Taxi Association-TAKKUN website http://takkun.taxi-tokyo.or.jp/en/

## SECTION 05

There is a roughly 2.9 million yen difference in average yearly income when compared with other industries. We must make efforts to improve the situation.

## Comparison of yearly income between taxi drivers in various countries

(Estimated: Adjusted to labor hours on a Japanese level)
about 6 million yen
(British citizens)

## sEction 05

The working conditions
of taxi drivers and
future initiatives

## section 05 The working conditions of taxi

## Promoting the employment of new-graduate and female drivers.

Securing new labor power through the employment of new-graduate drivers.

## The employment of new-graduate drivers

New graduates are welcome in the industry, as the average age of taxi drivers is now very high at 58.4 years old. They can flexibly respond to diversifying needs such as sightseeing taxis and nursing care / maternity taxis, and enhance the image of the industry as well.

## Transition in the average age of corporate taxi drivers

## Benefits for new graduates

- Low turnover rate (about 10\% of new graduates who become taxi drivers leave the profession, while the rate is $30 \%$ in other industries)
- The income is higher than others in the same age range

The average monthly income in the taxi industry in 2014: about 327,000 yen
The average starting salary for new graduates in Tokyo: 212,100 yen
The average starting salary for new graduates: 200,400 yen
(Source: Results of the Basic Survey on Wage Structure, by the Ministry of Health, Labour and Welfare (2014))

- Easy to have a work-life balance
(Those with alternate-day shifts can make time for themselves with 11 to 13 working days per month.)

## Orientation sessions for hiring new-graduate drivers

(Held on December 9 and 15, 2014)

Explanation on the employment of new graduates by business operators with experience in this area were given to about a hundred recruitment officers and related parties of taxi companies.

Comparison of monthly work hours between taxi drivers and workers in other industries

Transition in the number of taxi drivers (number of driver's certificates issued) [Men / Women]

## Initiatives in safety and security are the pillar of the taxi business.

Iransition in the number of accidents causing injury or death

As of March 31, 2015, according to the Tokyo Metropolitan Police Department

## On the introduction of drive recorders

Drive recorders, like flight recorders for automobiles, equipped with CCD cameras and G sensors. They are used for efficiency in dealing with automobile accidents as well as for education and training on safety. 96\% of corporate taxis have external cameras and 85\% have internal cameras.

Measures for preventing automobile accidents

## Measures taken by taxis for preventing automobile accidents

In addition to holding spring \& autumn traffic safety campaigns, safe driver contests, automobile transportation safety checks and overhaul inspections during the summer and year-end / New Year holiday seasons, Zero Accident Day activities, and summer campaigns for ending all traffic accidents, corporate taxi companies actively participate in the prevention of traffic accidents by promoting activities such as "This city and streets where kindness runs through", "Great campaign to prevent traffic accidents with all our might", and "Proper seat belt fastening", as well as spring \& autumn workshops for accident prevention officers, by labeling the fifth of every month "Zero Taxi Accident Day", and distributing posters and stickers.

## Tokyo Hire-Taxi Mutual Insurance Cooperative (established in April 1972)

As of March 31, 2015, business offices with 169 union members, 156 offices in bodily injury mutual aid associations, 122 offices with 9,028 vehicles in property damage mutual aid associations, and 7,748 other vehicles are affiliated. Safety education for the prevention of traffic accidents and a mutual aid system for traffic accidents (where up to 200 million yen per person and 200 million yen per accident in benefits are provided in cases where maximum insurance coverage is exceeded) are established. Furthermore, an umbrella policy with a Cooperative package that provides 5 billion yen ( 200 million yen exemption) per accident in coverage was incorporated in April 2000. There is also an add-on security system of workers' accident compensation insurance for occupational and nonoccupational deaths of employees as well as occupational residual disabilities in place (138 offices with 22,401 people in public welfare and mutual aid businesses affiliated).

## Automobile accident prevention and victim support

## National Agency for Automotive Safety and Victims' Aid (reorganized in 2003)

Courses on how to prevent automobile accidents are given to dispatchers and aptitude tests for drivers are given through institutions that are involved in the same measures. Victims of automobile accidents are also provided with psychological and economic support.

## Courses for dispatchers, etc.

Measures to ensure the prevention of accidents are taken through courses on dispatching duties and the laws involved
 to maintain the safe operation of automobiles.

## Aptitude tests and counseling for drivers

Measures are taken to prevent accidents through various diagnoses from a psychological and physiological aspect of the drivers' personalities, attitudes toward safe driving, cognitive and processing functioning, and visual functioning, as well as guidance and advice on safe driving that take into account their personal traits.

## Automobile accident victim support

Victims of automobile accidents are given both psychological and economic support such as through payments of nursing care fees for those suffering from serious residual disabilities, loans for orphans from automobile accidents, the establishment of medical centers, and the opening of hotlines for consultations on accidents.
(toll-free: 0570-000738)
Transition in taking aptitude tests by drivers

## Available 24 hours a day when it is time to rush off to the maternity hospital.

## Maternity Taxis

Simply by registering once, customers can be immediately taken to the hospital when needed, 24 hours a day, 365 days a week, without the need to give the driver directions.
Within two years after this service began in 2012, about one-third of the fifteen hundred taxis in Tokyo became available for the service. About half of the pregnant women in Tokyo have registered and roughly 10 to 20\% have used a Maternity Taxi when going into labor.

Number of Maternity Taxi registrations / number of dispatches during labor

## Feel safe when your child is being transported because you know the driver.

## Kids' taxis

Your child, even if alone, can take a taxi with a deferred payment system driven by an elite driver in charge of kids whom they are familiar with. It is a popular service that is mostly used for travelling to and from home and school / cram school.
Passengers with newborns or infants can also relax without having the need to worry about their surroundings.

Prefectures with registered Child Raising Taxis services

Number of registered Child Raising Taxi drivers in Japan

Number of resistered Child Raising Taxi companies in Japan

## Also popular with elderly passengers, passengers in wheelchairs, and passengers carrying a lot of baggage.

## UD (Universal Design) taxis

## On the introduction of UD taxis

UD taxis are being introduced and promoted for uncovering demands by individuals and revitalizing services.

## Number of vehicles introduced (auxiliary base)

|  | Tokyo | Kanagawa <br> Prefecture | Saitama <br> Prefecture | Chiba <br> Prefecture |
| :---: | :---: | :---: | :---: | :---: |
| $\mathbf{2 0 1 1}$ | $\mathbf{2}$ vehicles | 15 vehicles | - | 6 vehicles |
| $\mathbf{2 0 1 2}$ | 13 vehicles | $\mathbf{7 1}$ vehicles | 10 vehicles | 6 vehicles |
| $\mathbf{2 0 1 3}$ | 13 vehicles | $\mathbf{3 4}$ vehicles | 4 vehicles | 1 vehicles |
| $\mathbf{2 0 1 4}$ | 17 vehicles | 18 vehicles | $\mathbf{3}$ vehicles | 5 vehicles |

*The figures for 2014 represent the number of applications submitted by the end of December 2014.

## Training for Universal Drivers

Training on subjects such as how to communicate with elderly and disabled passengers, how to handle wheelchairs, and how to assist with boarding is provided by the National Welfare Transportation Service Association.
Courses that offer the necessary training for drivers is also provided by the Tokyo Taxi Center as of April 1, 2014 and half of the drivers in Tokyo are scheduled to be qualified by 2020.

Transitions in the number of drivers who have completed UD training (Tokyo)

## Certified drivers can take you on a sightseeing course through Tokyo.

## Tokyo Sightseeing Taxi

## Certification for Tokyo sightseeing taxi drivers

As part of the measures to revitalize taxi services, the Tokyo Sightseeing Taxi Promotion Association, which consists of experts on tourism, administrative agencies, related organizations, and others in the taxi industry, was established in 2012 along with a certification system. Drivers who have completed three examinations and a course become certified Tokyo sightseeing taxi drivers.

- Tokyo Sightseeing Taxi webpage http://www.taxi-tokyo.or.jp/english/kanko_taxi/

## Transition in the number of certified Tokyo sightseeing taxi drivers

The number of certified drivers is growing and is scheduled to reach three thousand by 2020.

As of March 31, 2015, according to the Tokyo Hire-Taxi Association

## stction 07

## Benefits for Tokyo sightseeing taxi drivers

Drivers who have logo magnets and present their certificate can enjoy the benefits below concerning parking areas, which is an issue when driving a Tokyo sightseeing taxi.

## - Tokyo Tower

Free access to parking areas (drivers only)

- Tokyo Skytree

1 hour of free parking (except on special holidays such as back-to-back holidays of three days or more)

- The Imperial Palace

Parking at the first exclusive parking area for sightseeing taxis at the Imperial Palace for 300 yen (limited to sightseeing busses until recently)

- The Metropolitan Government Building

Access to a priority parking area. 1 hour of free parking.

- The Edo-Tokyo Museum

Free access to regular exhibitions (drivers only). Discounted parking fees for Tokyo sightseeing taxis (500 yen) (prior notice required).

## For active communication with passengers.

## Public relations activities

Taxi services

## Questionnaire surveys

Questionnaire surveys are conducted every year to see how the general public views taxis and to receive feedback and comments. Ten thousand surveys were distributed to radio taxi users at major taxi stands in Tokyo from July 28 to August 1 in 2014 and the results are being used to improve services.

## Please take advantage of the various discount systems and available services.

## Discount system for the disabled

There are discounts for the handicapped as well as 10\% discounts on fares shown on the meters for people with intellectual disabilities.

## The use of Braille stickers

Braille stickers including company names and vehicle numbers are stuck inside taxis as a service for the visually impaired.

## Discounts for long-distance rides

Discounts are available for passengers who take long-distance rides.

## Non-smoking taxis

Smoking is prohibited in all taxis in order to prevent health hazards and offer pleasant rides.

## SECTION 07

## Increased efforts in improving services, together with the Tokyo Taxi Center.

## Implementation of the taxi driver registration system

Examinations on geographical knowledge, and education and guidance on customer service are given to drivers. Those who succeed are issued driver's certificates. There are certificates for private taxi drivers as well.

Transitions in the number of registered taxi drivers

As of March 31, 2015, according to the Tokyo Taxi Center
Transition in passing rate of examinations on geographical knowledge

## Guidance and training for taxi drivers

Instructions for the prevention of and taking corrective measures against taxi drivers who violate the Road Transportation Act such as through unjust refusal of passengers, the overcharging of fares, and the unauthorized tampering of meters are given, as well as training for new drivers based on Article 36, Part 2 of the transportation regulations.

Training for Universal Drivers in progress

## Taking and responding to complaints about taxi services

Complaints about taxi services can be properly handled by the taxi company (stated on the receipt) the passenger is riding with, through a 24 -hour Center phone line at 03-3648-0300, or through the Center's website.

## Efficient taxi stand operations

There are currently 314 taxi stands in Tokyo.
There are "Excellent Service Taxi" stands at the North and South Marunouchi Exits of Tokyo Station, the East Exit of Shinbashi Station, the West Underground Exit of Shinjuku Station, the West Exit of Shibuya Station, the Front Exit of Ueno Station, the West Exit of Ikebukuro Station, the prohibited zone in Ginza, in front of the West Exit of Shinagawa Station (Takanawa Exit) and at the International Terminal of Haneda Airport as well as an EV/HV taxi stand in front of the Shin-Marunouchi Building as of October 2011.

| Year | 1999 | 2000 | 2001 | 2002 | 2003 | 2004 | 2005 | 2006 | 2007 | 2008 | 2009 | 2010 | 2011 | 2012 | 2013 | 2014 |

## Taxi evaluation system

Sign of excellence

How the signs of excellence are presented

The taxi evaluation system started on April 1, 2013 in order to contribute to enhancing taxi convenience and services by offering finer taxi services upon reviewing evaluation standards in 2011, which was ten years after the rank evaluation system was introduced in 2001. The cases of guidance and complaints handled by the Center, information concerning service to customers and safety, managerial aspects, and driver quality are evaluated from the viewpoint of customer service, safety and operational control, and business attitude. Upon evaluations in 2012, the indications on taxi vehicles have become simple and easy to understand for passengers, with stickers indicating AA and A ranked taxis being unified as "Excellent Service Taxis". These signs of excellence are stuck on the windshields above the dashboards so that they can easily be seen from the fronts of the vehicles.

## Commendation system

Excellent drivers have been commended every year since 1977, with 26,864 people having received awards over the past 38 years. There are currently 9,574 drivers operating who possess an excellent driver award. Those who are commended are veteran drivers with ten or more years of experience, no violations, and who serve their passengers well. Excellent corporate business operators and business managers have also been commended since 1984.

## The current status of the taxi

Taxi services in Tokyo can be enjoyed at internationally reasonable fares and the industry here is fairly easy to take part in.

## International comparison of taxi fares (Tokyo, New York, London)

It is said that taxi fares in Tokyo are reasonable when compared with those of New York and London, with the current low value of the yen and because there is no tipping.

|  | Base distances | Initial fares | Added distance | Added fares | Remarks |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Tokyo | 2km | ¥730 | 280m | ¥90 | - |
| New York | 1/5miles <br> (320m) | $\begin{gathered} \$ 2.5 \\ (¥ 301) \end{gathered}$ | 1/5miles (320m) | $\begin{gathered} \$ 0.5 \\ (\neq 60) \end{gathered}$ | 20\% tips 0.5-dollar tax per ride |
| London | 259.8m | $\begin{gathered} £ 2.4 \\ (\neq 451) \end{gathered}$ | $\begin{aligned} & 129.9 \mathrm{~m} \\ & \text { (under } 17 \text { pounds) } \\ & 91.1 \mathrm{~m} \end{aligned}$ <br> (17 pounds or more) | $\begin{aligned} & £ 0.2 \\ & (\neq 38) \end{aligned}$ | 10\% tips |

## Taxi business regulations in other countries

There are also regulations on the taxi business in other countries, but entry is relatively easy in Tokyo.

|  | London |  | New York | Singapore | Tokyo |

## SECTION 08

## Inspection report 1 Taxis in New York

## Number of vehicles and the market

The taxis in New York, often called "yellow cabs", are different from the taxis in Tokyo in that business is limited to street hails.
They cannot be dispatched by radio, they are limited to central Manhattan, and the size of that zone is about the same as Minato Ward, Chuo Ward,

yellow cabs and Chiyoda Ward's areas combined.
In addition to yellow cabs, there are for-hire taxis such as "black cars", "luxury limousines", and "livery cabs". It is a comparatively dispersed market as there are many private business operators and the largest companies in both Tokyo and New York have only 10\% market shares.

Tokyo (special zones /
Busan transportation area)
$100 \%=48,154$ vehicles
Taxis : 44,305 vehicles
Hired taxis : 3,849 vehicles
(March 2011)

New York City 100\% = 57,252 vehicles
Taxis : 13,237 vehicles (street hails only / central Manhattan only)
Black : 9,020 vehicles (street hails prohibited / mainly corporate)
Luxury: 6,021 vehicles (street hails prohibited / special uses such as for hotels)
Livery: 26,021 vehicles (street hails prohibited / northern \& suburban Manhattan)
Other : 2,953 vehicles
(December 2012, TLC Annual Report)

Source: Inspection report of taxis in New York by the Tokyo Hire-Taxi Association (2013)

## About regulations

The hired taxi regulations in New York are different from those in Tokyo in that they are enforced on a municipal level while the regulations in Tokyo are enforced on a national level. The regulations are determined in two steps. The first is through city council meetings (based on recommendations from the committee of public transportation). The other is through decisions by the TLC (New York City Taxi and Limousine Commission), which is the regulatory authority. The TLC is the dominant regulatory authority in the United States as it is the largest and most powerful one, and it has control over every party involved in the taxi business.
The TLC's stance on regulations is more about active control and the tightening of regulations rather than on the loosening of regulations. It tries to meet the needs of the city's residents and take active control of detailed regulations while enforcing measures such as tightening regulations on street hail taxis (livery) of the five outer boroughs, the common dispatching of wheelchair-accessible vehicles, on-board credit card transaction systems and GPS driving control systems, and joint purchases of next-generation vehicles. Supply and demand adjustments are regulated through the issuing of "Medallion" business licenses, which cost about 100 million yen (as of April 2013) per vehicle. Each vehicle can be strictly regulated with the number of these medallions that are issued to yellow cabs, livery cabs, etc.

Medallion graph (transitions in value)

## industry in other countries

## On fares

When riding a yellow cab, you will see that the differences in New York's fares and Tokyo's fares are not that great when factoring in the weakening of the yen and tips. Tokyo's fares seeming high may be due largely in part to how they are perceived by tourists because the initial fares are high, taxi zones are large, and Narita Airport is far.
The fare from JFK Airport to Manhattan is Rate Code 2, which is a fixed fare of 5,200 yen (in April 2013) plus a highway toll and additional state tax, and not Rate Code 1, which is a New York City taxi fare.
Factors such as subway fares, inflation rates, drivers' costs, insurance and gasoline costs, and corporate earning rates are taken into consideration when the standards for increasing taxi rates are examined by the TLC.

Taxi rate comparison chart
(where 1 dollar equals 100 yen)

Source: Inspection report of taxis in New York by the Tokyo Hire-Taxi Association (2013)

All yellow cab vehicles now have credit card processing machines due to TLC' s TPEP program. These processing machines are integrated with a monitor that passengers can see and the taxi companies are able to obtain the machines for free due to revenues from the video ads that are shown on the monitors.

## SECTION 08

## Inspection report © Taxis in London

## Number of vehicles and the market

The city of London has black cabs (London Taxi) and minicabs (Private Hire). Only black cabs can transport passengers

black cabs through street hails and minicabs can only transport passengers with reservations. Black cabs are all privately-owned so they do not belong to any taxi companies. However, the drivers belong to radio unions and can therefore operate with radio dispatches in addition to street hails. There were 22,810 black cabs and 52,811 minicabs in operation in 2013 , with the black cabs operating within a 6-mile (about 10 kilometers) radius from the central location of Charing Cross and minicabs mostly in other areas. Also, the number of black cab drivers and vehicles hadn't changed much during the ten years preceding 2013 due to the virtual supply and demand adjustments made by TfL (Transport for London), which is the transport bureau of London (there were 25,538 drivers in 2013).

Transition in the number of black cab drivers and vehicles

## On regulations

Restrictions are governed in a London City-level administrative unit (equivalent to that of Tokyo). They are implemented by the TfL (the traffic bureau of London), which has full authority over all matters concerning taxis, and the mayor is the chief in charge.
Drivers are required to obtain the "Knowledge" license, which is issued by TfL and is difficult to obtain (requiring an average of forty-four months, or about four years), so although there is no limit to the number of drivers there are, it is as if there is a limit because of this license. The Taxi Trade Promotions Ltd cram school holds activities involving educational curriculums to help with the obtainment of this license.
 preparing for interviews, (3) learning the shortest routes, (4) mopeds running through the streets of London, (5) lists of routes attached to a moped

There are also strict regulations that limit vehicle supply, stipulating that (1) drivers and passengers must be separated, (2) height must be at least $1.35 \mathrm{~m} /$ length including leg room must be at least $1.2 \mathrm{~m} /$ seat width must be at least 0.7 m , (3) vehicles must be equipped with boarding stairs for wheelchairs, and (4) rotation diameters must be within 28 feet (about 8.535 m ).

## On fares

It may be thought that black cabs seem inexpensive because their initial fares are relatively cheap (Tokyo: 730 yen, London: 408 yen (as of November2014)), but normal rides ( 1 km or more) based on the fare table prescribed by TfL are more expensive than those in Tokyo. The fares from Heathrow Airport to urban London are 1.5 to 2 times higher than fares in Tokyo (Haneda Airport), and they do not even have fixed fares. In other words, their initial fares are low, but their total fares are higher. Fares are distinguished between Tariff 1, Tariff 2, and Tariff 3 fares, which depend on the day and time. Travel time and distance are counted simultaneously so the highest one that is reached is added.

## Comparison of taxi fares

OTariff 1-6 a.m. to 10 p.m. from Monday to Friday

|  | With/without time factored in | London Tariff 1 <br> (*as of November 2014) | Special zones in Tokyo / Busan transportation area <no premiums> (*as of July 2015 - when based on the tax type on the left) |

## The revision of fares

The revision of fares is discussed in the same official areas and with the same official fares every year on April 1 but the discussions are becoming shorter with the introduction of a quantified taxi cost index.
A fuel surcharge system has also been established five years ago and is programmed in taxi meters. However, it has not been implemented yet.

The index of the black cab cost structure

Initial 2015 weights

## Access to the airport at reasonable fares．

## Operation of fixed－fare taxis

Implementation of the Haneda Airport fixed fare system

A fixed fare system for rides between Haneda Airport and various locations in Tokyo was introduced with the collaboration of the International Terminal as of October 21，2010．This system allows the offering of services with fares 10 to $30 \%$ lower than those indicated on the meters and without the need to worry about fares going up due to conditions such as traffic congestions．
There are also fixed fares to Haneda Airport and Tokyo Disney Resort． Each vehicle also has a point－and－speak phrase guide in English，Korean， and Chinese to help smoothening communication with visitors from abroad．

(Notes) The transportation income as of 1989 includes consumption tax.
Gross number of actual vehicles in existence $=$ number of days in existence $\times$ number of commercial vehicles
Rate of actual operations = gross number of actual vehicles in operation / gross number of actual vehicles in existence $\times 100$
Gross number of actual vehicles in operation = number of days in operation $\times$ number of commercial vehicles
Rate of actual vehicles $=$ actual vehicles in kilometers $/$ distance in kilometers $\times 100$
Rate of operations of 1 vehicle per day Distance in kilometers = distance in kilometers / gross number of actual vehicles in operation
Number of transports = number of transports / gross number of actual vehicles in operation
Transportation income $=$ transportation income / gross number of actual vehicles in operation
Number of kilometers by actual vehicles per vehicle $=$ actual vehicles in kilometers / number of transports

(Notes) The transportation income as of 1989 includes consumption tax.
The geisha (taxi on its way) / deadhead distance is calculated in kilometers by actual vehicle and the standards for the rates of actual vehicles are different due to the revisions in the geisha / deadhead system as of November 1981.
Gross number of actual vehicles in existence $=$ number of days in existence $\times$ number of commercial vehicles
Rate of actual operations $=$ gross number of actual vehicles in operation / gross number of actual vehicles in existence $\times 100$ Gross number of actual vehicles in operation $=$ number of days in operation $\times$ number of commercial vehicles
Rate of actual vehicles $=$ actual vehicles in kilometers $/$ distance in kilometers $\times 100$
Rate of operations of 1 vehicle per day Distance in kilometers = distance in kilometers / gross number of actual vehicles in operation Number of transports = number of transports / gross number of actual vehicles in operation Transportation income = transportation income / gross number of actual vehicles in operation
Number of kilometers by actual vehicles per vehicle = actual vehicles in kilometers / number of transports

| Item <br> Year | Fleet vehicles |  | Rate of actual operations (\%) | Distance in kilometers |  | Rate of actual vehicles (\%) | $\left\|\begin{array}{c} \text { Number } \\ \text { of } \\ \text { transports } \end{array}\right\|$ | Number of People being transported | ```Transportation income (by I thousand yen)``` | By operating vehicles per day |  |  | Number <br> of <br> kilometers <br> by actual <br> vehicles <br> per <br> company |

(Notes) The transportation income as of 1989 includes consumption tax.
The standards for the rates of actual vehicles are different because the actual vehicles in kilometers were calculated as the zones from dispatch to return from between 1981 and 1995.
Gross number of actual vehicles in existence $=$ number of days in existence $\times$ number of commercial vehicles
Rate of actual operations = gross number of actual vehicles in operation / gross number of actual vehicles in existence $\times 100$
Gross number of actual vehicles in operation = number of days in operation $\times$ number of commercial vehicles
Rate of actual vehicles $=$ actual vehicles in kilometers / distance in kilometers $\times 100$
Rate of operations of 1 vehicle per day Distance in kilometers = distance in kilometers / gross number of actual vehicles in operation Number of transports = number of transports / gross number of actual vehicles in operation Transportation income $=$ transportation income / gross number of actual vehicles in operation Number of kilometers by actual vehicles per vehicle $=$ actual vehicles in kilometers / number of transports
